DATA SHEET

1 96171

Reagent: vSC60

Catalog Number: 3377

Lot Number:

Provided: Approximately 250 μ l crude virus preparation, titer 1.0×10^9 .

Host or Recommended Host or Host Cells: Virus stocks grown in HeLa S3 cells.

Description: Derived from WR parental vaccinia virus strain. Contains HIV-1 *env* gene from Lai, IIIB, BH8 isolate (R. Gallo, National Cancer Institute, Bethesda, MD). *Env* gene cloned into plasmid pSC59 which contains a synthetic vaccinia strong early/late promoter (Chakrabarti S, Sisler JR, Moss B. *BioTechniques* **23**:1094,1997.). Vaccinia recombinant generated by homologous recombination into the TK locus, and selection for TK- plaques using standard procedures.

Special Characteristics: Useful for expression of *env* glycoprotein for biochemical, immunologic, and functional studies.
Sterility: Negative for bacteria, fungi, and mycoplasma.

Recommended Storage: -70degreeC.

Contributor: Dr. Sekhar Chakrabarti and Dr. Bernard Moss.

NOTE: Acknowledgment for publications should read "The following reagent was obtained through the NIH AIDS Reagent Program, Division of AIDS, NIAID, NIH: vSC60 from Dr. Sekhar Chakrabarti and Dr. Bernard Moss."

Scientists at for-profit institutions or who intend commercial use of this reagent must contact Dr. Sally Hu at the NIH Office of Technology Transfer, Email: hus@mail.nih.gov, Phone: 301-435-5606, before the reagent can be released. Please specify the name and a description of the intended use of the reagent.

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.

reagent.
